

### Breaking the Speed Barrier

CN!Express is fast.

The days of waiting hours for your batches to complete are over. CN!Express provides multiple simultaneous connections to your processor(s).

What does that mean for you? Where others send one transaction after another, CN!Express sends up to 10 transactions at a time.

At top speed, CN!Express processes 1,000 transactions in under 5 minutes.

### The Highest Level of Security

CN!Express is validated by, and strictly adheres to, the Visa U.S.A. Cardholder Information Security Program (CISP) Payment Application Best Practices (PABP). Sensitive data is fully protected.

### Flexibility

As you would expect of a modern payment application, the CN!Express built-in web server provides a quick and easy method for connecting your world to your payment processor. CN!Express also supports traditional file-based transactions to support your business environment.

### Simplicity

Things change. Visa updates the rules. Processors update their interface specification. You suddenly need to update your systems.

CN!Express isolates you from these changes. CN!Express provides a single, simple interface to multiple processors. Change your mind without changing your software.

### Complete Payment System

CN!Express contains everything you need in one package. Set it up in minutes, then sit back while CN!Express processes your transactions quicker than any comparably priced product on the market.

#### PAYMENT ACCEPTANCE OPTIONS

#### Security Features:

- Visa PABP Validation
- PCI Documentation
- Never stores Card Security Codes
- All accounts encrypted with 256-bit AES encryption
